Automate Your End-to-End AP Process

Canon Information and Imaging Solutions' (CIIS) accounts payable (AP) automation solution integrates with Oracle's PeopleSoft Payables and PeopleSoft eSettlements to reduce processing time and costs, increase user productivity, and strengthen visibility and controls.

Company Overview

CIIS, a wholly owned subsidiary of Canon U.S.A., Inc., was formed to bring together Canon's greatest intangible assets: information management expertise and imaging technologies. Utilizing Canon's vast collection of imaging technology and development tools along with select third-party enterprise applications, CIIS delivers compelling market-driven services and solutions in the areas of business process automation, procure-to-pay and AP automation, order-to-cash automation, order management automation, and more.

Integration Overview

CIIS' AP automation solution for PeopleSoft Payables and PeopleSoft eSettlements leverages PeopleSoft's open imaging integration to automate the end-to-end AP process. PeopleSoft customers are looking to replace cumbersome, manual AP invoice processing with a fully automated system. By automating your AP process, CIIS' solution for PeopleSoft can bring numerous business benefits including decreased processing time and costs, increased user productivity, greater visibility and controls, and ability to take advantage of supplier discounts.

The AP automation solution for PeopleSoft provides the following capabilities:

- The data on the invoices can automatically be extracted and verified against the vendor master file and the invoice image will be indexed and stored.
- The completed and verified data can automatically be sent to PeopleSoft to create the invoice.
- All invoice images can be electronically stored and made available, with the correct permissions, to users throughout the organization, either directly from the repository or from within PeopleSoft.

Validated Integration

PeopleSoft

Oracle Validated Integration gives customers confidence that a partner's integration is functionally sound and performs as designed. This can help customers to reduce deployment risk, lower total cost of ownership, and improve the user experience related to the partner's integrated offering.

Integration Details

By leveraging PeopleSoft's open imaging integration and Canon's Enterprise Imaging Platform, CIIS' AP automation solution enables customers to manage business processes that require integration of information from paper and digital documents. Specifically, the integration focuses on the AP business process.

AP invoice processing (procure-to-pay) is automated by integrating information extracted from the invoice with PeopleSoft master data with purchase order details. The solution provides robust data extraction, intelligent document recognition, and validation capabilities to enable end-to-end management of invoices. It includes the ability to archive AP invoice images for easy search and retrieval by leveraging PeopleSoft's open imaging integration. Data extracted from an invoice is used to create PeopleSoft invoice transactions. As a result, the procure-to-pay process is much faster and more efficient, and the information is visible to business users across departments.

Environment
